ABSTRACT

A bibliography of higher education statistical compilations published by the U.S. Office of Education, and in a few cases, other agencies or private organizations is presented. The bibliography covers the 1940s through 1980 and is divided into the following categories: general publications, finances, students (enrollment and degrees), faculty and staff, facilities, and libraries. Title, publication data, and pagination are followed by the Superintendent of Documents classification number, and an index of titles is included. The introduction to the bibliography briefly traces historical developments since 1840 regarding the compilation of educational statistics, and the different federal agencies that have been established or reorganized. From the beginning, collecting the statistical data required by law was difficult since no one at the state level knew the number of colleges within that state. It was discovered that little data on higher education existed since state education agencies focused their attention on elementary and secondary schools. Also lacking was consistency in the available data and definitions of terms. As time progressed, the educational establishment urged greater standardization of terminology, and statistics that were collected gained validity and usefulness in regard to financial and educational planning. The evolving role of the National Center for Education Statistics also is traced. (SW)

HIGHER EDUCATION

STATISTICAL COMPILATIONS OF THE U.S. DEPARTMENT OF EDUCATION

INTRODUCTION

The Federal Government has compiled educational statistics since the census of 1840 when questions regarding illiteracy rates and numbers of schools, colleges, and students were included. But no major federal education statute existed until President Lincoln signed into law the Morrill Act of 1862 which encouraged the states to establish land-grant institutions of higher education. As leading educators clamored for increased educational information on the national level, the Department of Education was finally established in 1867 "for the purpose of collecting such statistics and facts as shall show the condition and progress of education in the several States and Territories..." The Department was soon reduced to an Office or Bureau under the Interior Department where it remained until 1939 when it became a part of the new Federal Security Agency. In 1953 this agency attained departmental status as the Department of Health, Education, and Welfare. As education became more and more important and the amount of monies expended soared, many government officials and private citizens felt the time was ripe for a separate cabinet level department of education. In 1980 their efforts were rewarded with the creation of the new Department of Education, thus coming full circle from 1867.

Right from the beginning, collecting the statistical data required by law proved a difficult task as no one at the state level even knew the number of colleges within that state. The early commissioners of education urged Congress for additional staff enabling them to collect rudimentary statistics and establish working relationships with state agencies. Problems arose when it was discovered that little data existed since state education agencies focused their attention on elementary and secondary schools. Also lacking was consistency in the available data and definitions of terms. As time progressed, the educational establishment urged greater standardization of terminology, and statistics collected gained validity. Administrators came to appreciate these data utilizing them for comparisons with similar institutions to secure better funding and support, planning policy, upgrading curricula, setting higher standards, etc.

Various divisions in the Office of Education had produced these data until 1965 when the National Center for Educational Statistics (NCES) was established. Congress had hoped that this agency would gain the stature of the Bureau of Labor Statistics and the National Center for Health Statistics, two other major statistical collecting arms of the government; but Congress never appropriated sufficient funding or staff so it could even begin to conduct programs similar to the other agencies. Federal funding for education has always been a touchy issue because of the fear that more federal involvement would diminish state and local controls. Frequent reorganizations within the NCES itself have not maintained the stability needed to fulfill its mission in the development of educational policy.

In 1966 NCES established the Higher Education General Information Survey otherwise known as HEGIS. This Survey, conducted annually, collects data from all the colleges and universities in the United States relating to enrollment, degrees granted, faculty and staff, and financial operations. Less frequently, other characteristics are surveyed, such as libraries, physical facilities, and salaries and other fringe benefits. The HEGIS system has also issued manuals on standardization of terms and definitions to improve compatability of data. Criticism has been lodged because the questions tend to change, making simple updating of previous forms impossible and demanding data not collected by anyone, thus wasting thousands of hours as administrators wrestle with compliance. Occasionally NCES must backtrack and state that figures assembled in one of two ways will be acceptable. State education offices have tried to adapt HEGIS to their own states to cut down on the paper-work burden for their own staffs. Respondents have seriously questioned the necessity of some of the inquiries convinced that much of the sought information will simply vanish into a federal file never to surface again.

The Educational Amendments of 1974 established a new National Center for Education Statistics, broadening its role from collecting and reporting "full and complete statistics on the condition of education in the United States" to conducting and publishing "reports on specialized analysis of the meaning and significance of such statistics" and to assisting "State and local educational agencies in improving and automating their statistical and data collection activities." Consequently, recent years have seen an increase in the analytical report and a decrease in the simple reporting of statistics.

After all the data from the states and institutions of higher education have been collected, NCES edits and reedits the material, verifying and comparing it to data received for previous years. If discrepancies occur, the Center contacts the individual agency to determine the cause. Letters must be written to those institutions failing to comply with supplying data. Often at least two years may elapse before a report is finally forthcoming, thus rendering the data obsolete before it is even available. NCES is now releasing preliminary statistics based on sampling but there is considerable delay despite these efforts. NCES has greatly reduced the number of paper copies for distribution of any single title and has weeded its mailing lists in an effort to cut expenses. With the advent of computers, many reports which formerly appeared in detail for each institution are now published only in summary reports with the notation that detailed data are available in computer form by special request. Individuals may describe specific needs and receive the information desired within a reasonable length of time. Computer tapes are available with prices supplied upon application. Further information may be found in the NCES Directory of Federal Agency Education Data Tapes by Edward D. Mooney, 1979 (HE 19.302: Ed 8/3/979).

This bibliography was originally prepared to meet the needs of faculty and students at this university for series of statistical publications issued by the U.S. Office of Education and covers the 1940's through 1980. It was distributed to the U.S.O.E. Training Institute on Government Publications held in March 1979 as reported in ERIC Document ED 184 571. Because almost all of the titles were published by the Office or Department of Education's National Center for Education Statistics and its predecessors, no agency is given unless another body or private organization produced the report. Title, publication date, and pagination are followed by the Superintendent of

Documents Classification number enclosed in parentheses. This system is used by many Federal depository libraries, is based on provenance rather than subject, and changes frequently as the government undergoes its many reorganizations. Titles consolidate, split, are eliminated for several years and occasionally reappear. At times a private organization issues a report to fill a gap in the series and this is noted when known.
